

Kanguru **USB Duplicator**[™]

The Ultimate Tool for Data Distribution & Back-up!

Kanguru USB Duplicators[™] are designed to streamline data duplication and backup activities among USB storage devices. A user friendly LCD interface and intuitive menu allow you to copy data simultaneously to multiple USB devices quickly and easily without requiring the resources of a computer. Simply plug your USB devices into the duplicator's USB ports and choose your duplication method. Kanguru USB Duplicators work with USB memory sticks as well as USB hard drives. The built-in 500GB hard drive allows you to store drive images on it and use those images as your source, thus freeing an additional USB port to copy to.

Kanguru USB Duplicators excel in sales and marketing preparation, IT work, backups, PC rollouts and more. They use six main function modes to copy, compare, verify and erase data. Kanguru USB Duplicators also provide numerous setup and advanced setup options for the experienced user. Main functions include:

- Full Mode – Sector by sector
- Brief Mode – Only sectors that contain data
- Resize Mode – Copies from smaller source drive to larger target drive
- Smart Mode – System automatically selects the most efficient mode

Key Features:

- 33MB/s transfer rate (per USB port)*
**actual transfer rate dependent upon device*
- Copy data to 11 USB devices at once
- Standalone operation, no computer required
- 500GB hard drive for storing multiple images to copy from
- Supports most USB Mass Storage Devices (Flash Drives, Hard Drives, Card Readers, etc.)
- Size and brand independent
- Supports all major file systems (FAT, FAT32, NTFS, HFS, EXT2, EXT3, EXT4)
- High speed USB2.0 (Backwards compatible with USB1.1)
- 1 year limited warranty
